## Advanced Algebra

Unit 2: Family of Functions
The MAJOR note for this unit is knowing very well the following:

```
y=a(x-h) + k
```

" $a$ " is a vertical stretch or shrink
" $h$ " moves the graph to the left or right. You are responsible to know which direction by looking at the function! ( $x-6$ ) moves the graph 6 units to the RIGHT! $(x+4)$ moves the graph 4 units to the Left " $k$ " moves the graph up or down. This number is true to what you see.

| PARENT <br> FUNCTIONS | Family it <br> belongs to. | Vertex or <br> starting <br> point of the <br> graph | Translation | Family it <br> belongs to. | Vertex or <br> starting <br> point? |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{Y}=2 \mathrm{x}$ | Linear |  | $\mathrm{f}(\mathrm{x})=3 \mathrm{x}+6$ | Linear |  |
| $\mathrm{f}(\mathrm{x})=\mathrm{x}^{2}$ | Quadratic |  | $\mathrm{f}(\mathrm{x})=(\mathrm{x}-4)^{2}+6$ | Quadratic |  |
| $\mathrm{f}(\mathrm{x})=\mathrm{x}^{3}$ | Cubic |  | $\mathrm{f}(\mathrm{x})=\mathrm{x}^{3}+2$ | Cubic |  |
| $\mathrm{f}(\mathrm{x})=\|x\|$ | Absolute <br> Value |  | $\mathrm{f}(\mathrm{x})=\|x-3\|$ | Absolute <br> Value |  |
| $\mathrm{f}(\mathrm{x})=\sqrt{x}$ | Square root |  | $\mathrm{f}(\mathrm{x})=\sqrt{(x-3)}$ | Square root |  |
| $\mathrm{f}(\mathrm{x})=\sqrt[3]{x}$ | Cube Root |  | $\mathrm{F}(\mathrm{x})=\sqrt[3]{(x+2)}+4$ |  |  |
| $\mathrm{f}(\mathrm{x})=\frac{1}{x}$ | Reciprocal |  | $\mathrm{F}(\mathrm{x})=\frac{1}{(x-2)}$ |  |  |

The parent function is $y=x^{2}$. Write an equation for each of the new quadratics.

1) The parabola is translated down 5 units.
2) The parabola is translated up 3 units.
3) The parabola is translated right 3 units.
4) The parabola is translated left 4 units.

I can work with function notation.
For the following problems $f(x)=x^{2}$. Describe the location of the parabola relative to the graph of
$f(x)=x^{2}$.

1) $y=f(x)-3$
2) $y=f(x)+4$
3) $y=f(x-2)$
4) $y=f(x+4)$

Describe what happens to the graph of $y=x^{2}$ in the following situations.
a) $x$ is replaced with $(x-3)$
b) $x$ is replaced with $(x+3)$
c) $y$ is replaced with $(y-2)$
d) $y$ is replaced with $(y+2)$

## I can evaluate composition of functions.

Given $f(x)=3 x+2$ and $g(x)=x^{2}$ answer the following questions:
$f(4)$
$g(-5)$
$f(g(2))$
$g(f(0))$
$f(g(x))$
$g(f(x))$
$g(f(x+1))$
$f(g(x+2))$
