

Finding Angles and Trigonometry Word Problems Assignment #1

_____ 1.

Which ratio should be used to find x ?

- a. tangent
- b. cosine
- c. sine
- d. Pythagorean

_____ 2.

Which ratio should be used to find x ?

- a. tangent
- b. cosine
- c. sine
- d. Pythagorean

_____ 3.

What ratio should be used to find the measure of angle A?

- a. tangent
- b. cosine
- c. sine
- d. Pythagorean

_____ 4.

What ratio should be used to find the measure of angle A?

- a. tangent
- b. cosine
- c. sine
- d. Pythagorean

Use the triangle at the right to help you solve the following problems. Label the information given and the use SOH CAH TOA or Pythagorean Theorem to find the answers.

_____ 5.

Mary is flying a kite on a 50-meter string. The string is making a 50° angle with the ground. How high above the ground is the kite?

_____ 6. At a certain time of day, the angle of elevation of the sun is 44° . Find the length of the shadow cast by a building 30 meters high.

_____ 7. A 20-foot ladder leans against a wall so that the base of the ladder is 8 feet from the base of the building. What angle does the ladder make with the ground?

Find the measure of angle C to the nearest degree. SHOW WORK.

_____ 8.

_____ 10.

_____ 9.

_____ 11.

17. A person on a bridge sights a boat at an angle of depression of 6° . The bridge is 96 ft above the water. If the boat is traveling 40ft/min, about how long will it take the boat to reach the bridge?
18. A rocket is fired at sea level and climbs at a constant angle of 75° through a distance of 10,000 feet. Approximate its altitude to the nearest foot.
19. A surveyor is 100 meters from a bridge. The angle of elevation to the top of the bridge is 35° . The surveyor's instrument is 1.45 meters above the ground. Find the height of the bridge.
20. Before Apollo 11 descended to the surface of the moon, it made one orbit at a distance of 3 miles from the surface. At one point in its orbit, the onboard guidance system measured the angles of depression to the near and far edges of the huge crater. The angle measured 25° and 18° . Find the distance across the crater.
21. A lighthouse built at sea level is 150 feet high. From its top, the angle of depression of a buoy is 25° . Find, to the nearest foot, the distance from the buoy to the foot of lighthouse.

22. In a parking garage, each level is 20 feet apart. The ramp to each level is 130 feet long. Find the measure of the angle of elevation for each ramp.
